**Figure 6 - Headset Accessory Clearances**

Headsets must always make proper contact with the charging pins while hanging from the charging connector.

The charging hook mount should let the PULSE Elite wireless headset charge properly in either forward or reverse orientation. To accomplish this:

- Provide at least 240 mm of clearance along the Z-axis
- Locate the hanger (NOT hook) proud of the mounting surface to provide clearance along the Y-axis.

## 4 Physical Requirements

Mounts should support the charging hook under a load of 10 kg for a duration of 1 hour.
